Carbon Pool		Forest Fraction	Description
Vegetation biomass	Above Ground Biomass (AGB)	Stems	Merchantable stems with bark, which are extracted from the forest.
		Other AGB	Harvest Residues, which can be extracted or left on the field.
	Below Ground Biomass (BGB)	BGB	The BGB of the harvested trees is assumed to be decomposed after harvesting, while the BGB of new trees continues to grow.
Natural Dead organic matter (nDOM)		Litter and dead wood.	Typically left in the forest for decomposition.
Soil Organic Carbon (SOC) $S_{(t)}$			The soil carbon pool is assumed reduce and gradually increase back to its original state after the harvesting.
